                                                                             have bactericidal activity. The nucleic acids, encoding the protein antigens, may be used for the recombinant production of the protein they encode. The protein antigens may then be used as vaccines for t prevention and treatment of Streptococcal infections in mammals (especially humans) which result in, e.g. meningitis, otitis media, bacteraemia and/or pneumonia. The present sequence represents as s, pneumoniae BVH-11-2 protein antigen, from the present invention.
                                                      Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Streptococcus
                                                                                                                                                               The present invention describes nucleic acids (I) encoding protein antigens (II) from Streptococcus pneumoniae. The protein antigens

The protein antigens have bactericidal activity. The nucleic acids, encoding the protein antigens, may be used for the recombinant production of the proteins they encode. The protein antigens may then be used as vaccines for the prevention and treatment of Streptococcal infections in mammals (especially humans) which result in, e.g. meningitis, otitis media, bacteraemia and/or pneumonia. The present sequence represents a s. pneumoniae BVH-11 protein antigen, from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Streptococcal otitis media,

        The present sequence represents a protein from Streptococcus pneumoniae. The nucleic acid sequence encoding the Streptococcus pneumoniae protein can be useful in vaccines for inducing protective antibodies against Streptococcus pneumoniae, for treatment or prevention of infection e.g. pneumonia, otitis media or meningitis. Probes based on the nucleic acid are used to detect Streptococcus infection (by usual hybridisation or amplification methods), also for isolating Streptococcus genes or their allelic variants. The protein can be used similarly to detect specific antibodies in standard immunoassays, especially for diagnosing or monitoring infections. Antibodies which bind the protein are used to
                                                                                                                                           Claim
                                                                                                                                                               Nucleic acid encoding antigenic peptide(s) from Streptococcus pneumoniae - or their epitope-containing fragments, useful in protective or therapeutic vaccines, and for diagnosis
                                                                                                                                                                                                                                                                                                31-OCT-1996;

The S. pneumoniae antigens have antibacterial activity and can be used in vaccines. The S. pneumoniae antigens can also be used to prevent or attenuate a Streptococcal infection in an animal. The polynucleotides encoding the S. pneumoniae antigens can be used to detect Streptococcus nucleic acids. ABQ84905 to ABQ85130 represent primers used in the cloning of S. pneumoniae ORFs (open reading fra which are used in an example from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New Streptococcus pneumoniae antigens, useful for Streptococcus and for preventing or attenuating di Streptococcus infection -
                                                                                                                                                                                                                                                                                                                                                                       Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Streptococcus pneumoniae; epitope; vaccine; antigenic protein; antibacterial; Streptococcal infection; detection.

(HCPC3). The sequence was deduced from the open reading frame of an isolated gene (see AAX25394). A smaller (20 kDa) HCPC3 protease is encoded by an open reading frame of S. pneumoniae serotype 3, and this open reading frame may be part of a larger open reading frame corresponding to the present sequence from the S. pneumoniae serotype 4 genome. Amino acids 1-58 and 90-132 of the 20 kDa orotein have substantial sequence identity with amino acids 170-227 and 258-300 of the 79 kDa protein. Proteins and peptides or 20 lypeptides containing these regions, and DNA sequences encoding them, are claimed. HCPC3 proteases and polypeptides can be used as immune system stimulating compositions (claimed). They can produce an immune response against infection or colonization (claimed). They can produce a B cell response, a T cell response, an epithelial cell response, or an endothelial cell response (claimed). The expression of the proteins on the surface of an organ of an animal used in xenotransplantation can be used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches 476;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention describes nucleic acids (I) encoding protein antigens (II) from Streptococcus pneumoniae. The protein antigens have bactericidal activity. The nucleic acids, encoding the protein antigens, may be used for the recombinant production of the proteins they encode. The protein antigens at they encode a treatment of Streptococcal infections in mammals (especially humans) which result in, e.g. meningitis, otitis media, bacteraemia and/or pneumonia. The present sequence represents the

           The invention describes an isolated polypeptide (I) with 70-90% identity to Streptococcus pneumonia protein BVH-3, BVH-11, variants BVH-3 or BVH-11, or chimeric sequences derived from them. A vaccine comprising (I) is useful for therapeutic or prophylactic treatment compnising, otitis media, bacteraemia or pneumonia infection in an individual susceptible to these disorders. (II) is also useful for therapeutic or prophylactic treatment of any streptococcal bacterial
                                                                                                                                                         New Streptococcus pneumoniae BVH-3 and BVH-11 variant and epitope-bearing polypeptides, useful as vaccine components for treating or preventing streptococcal infections such as otitis media, meningitis, and bacteraemia
                                                                                                                                                                                                                                                                                                                                                                                                                                   Streptococcus Synthetic.
                                                                                                                                                                                                                                                              Hamel

The Streptococcus polypeptides are useful in a diagnostic test for S. pneumoniae infection. (III) is useful for designing DNA probes for use in detecting the presence of Streptococcus in a biological sample suspected of containing the bacteria. The DNA probes may also be used for detecting circulating S. pneumonia nucleic acid in a sample for diagnosing streptococcal infections. This sequence represents a truncate of a Streptococcus pneumoniae gene used to obtain antigenic peptides, described in the method of the invention.

Note: This sequence does not appear in the specification but has

                                                                                                                                                          밁
                                                                                                                                                                                          Ş
                                                                                                                                                                                                                                                                                            The invention describes an isolated polypeptide (I) with 70-90% CC identity to Streptococcus pneumonia protein BVH-3, BVH-11, variants of BVH-3 or BVH-11, or chimeric sequences derived from them. A vaccine (II) CC comprising (I) is useful for therapeutic or prophylactic treatment of meningitis, otitis media, bacteraemia or pneumonia infection in an CC individual susceptible to these disorders. (II) is also useful for therapeutic or prophylactic treatment of sup streptococcus bacterial CC infection (e.g., caused by Streptococcus pneumoniae, group A Streptococcus such as Streptococcus pneumoniae, group A Streptococcus such as Streptococcus pneumoniae, S. uberis, S. nocardia or CC staphylococcus aureus) in an individual susceptible to the infection. CC staphylococcus aureus) in an individual susceptible to the infection. CC test for S. pneumoniae infection. (III) is useful in DNA immunisation CC test for S. pneumoniae infection. (III) is useful in a diagnostic test for S. pneumoniae infection. (III) is useful in a biological sample suspected of containing the presence of Streptococcus in a biological coused for detecting circulating S. pneumonia nucleic acid in a sample for diagnosing streptococcal infections. This sequence represents a chimeric consumoniae genes, described in the method of the invention but has cC been created according to information given in the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    241
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            421
```

The invention describes an isolated polypeptide (I) with 70-90% identity to Streptococcus pneumonia protein BVH-3, BVH-11, variants BVH-3 or BVH-11, or chimeric sequences derived from them. A vaccine comprising (I) is useful for therapeutic or prophylactic treatment omeningitis, otitis media, bacteraemia or pneumonia infection in an individual susceptible to these disorders. (II) is also useful for

of.

therapeutic

prophylactic treatment

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    techniques. The Streptococcus polypeptides are useful in a diagnostic test for S. pneumoniae infection. (III) is useful for designing DNA probes for use in detecting the presence of Streptococcus in a biological sample suspected of containing the bacteria. The DNA probes may also be used for detecting circulating S. pneumonia nucleic acid in a sample for diagnosing streptococcal infections. This sequence represents a chimeric gene created from fragments and variant fragments of Streptococcus pneumoniae genes, described in the method of the invention.

Note: This sequence does not appear in the specification but has been created according to information given in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       infection (e.g., caused by Streptococcus pneumóniae, group A Streptococcus such as Streptococcus pyogenes, group B Streptococcus such as Streptococcus agalactiae, S. dysgalactiae, S. uberis, S. nocardia or Staphylococcus aureus) in an individual susceptible to the infection. A polynuclectide (III) encoding (I) is useful in DNA immunisation

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention describes nucleic acids (I) encoding protein antigens (II) from Streptococcus pneumoniae. The protein antigens have bactericidal activity. The nucleic acids, encoding the protein antigens, may be used for the recombinant production of the proteins they encode. The protein antigens may then be used as vaccines for t prevention and treatment of Streptococcal infections in mammals (especially humans) which result in, e.g. meningitis, otitis media, bacteraemia and/or pneumonia. The present sequence represents the S. pneumoniae NEW4 protein antigen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Streptococcal otitis media,

A polynucleotide (III) encoding (I) is useful in DNA immunisation techniques. The Streptococcus polypeptides are useful in a diagnostic test for S. pneumoniae infection. (III) is useful for designing DNA probes for use in detecting the presence of Streptococcus in a biological sample suspected of containing the bacteria. The DNA probes may also be used for detecting circulating S. pneumonia nucleic acid in a sample for diagnosing streptococcal infections. This sequence represents a truncate

                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention describes an isolated polypeptide (I) with 70-90% cidentity to Streptcoccus pneumonia protein BVH-3, BVH-11, variants of BVH-3 or BVH-11, or chimeric sequences derived from them. A vaccine (II) comprising (I) is useful for therapeutic or prophylactic treatment of meningitis, otitis media, bacteraemia or pneumonia infection in an individual susceptible to these disorders. (II) is also useful for therapeutic or prophylactic treatment of any streptcoccal bacterial infection (e.g., caused by Streptcoccus pneumoniae, group A Streptcoccus such as Streptcoccus such so Streptcoccus pneumoniae, group A streptcoccus such as Streptcoccus synogenes, group B Streptcoccus such as Streptcoccus gneumoniae, group and streptcoccus agalactiae, S. dysgalactiae, S. uberis, S. nocardia or Staphylococcus aureus) in an individual susceptible to the infection. A polypucleotide (III) encoding (I) is useful in DNA immunisation techniques. The Streptcoccus polypeptides are useful for designing DNA crosses for use in detering the nesence of freentcoccus in a higherical
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

                                                                                                                                                                                                                                                                 antigens (II) from Streptococcus pneumoniae. The protein antigens have bactericidal activity. The nucleic acids, encoding the protein antigens, may be used for the recombinant production of the protein they encode. The protein antigens may then be used as vaccines for the prevention and treatment of Streptococcal infections in mammals (especially humans) which result in, e.g. meningitis, otitis media, bacteraemia and/or pneumonia. The present sequence represents the
                                                                                                                                                                                                                                                                                                                                                                                                      Streptococcal otitis media,

                                                                                            The invention describes an isolated polypeptide (I) with 70-90% identity to Streptococcus pneumonia protein BVH-3, BWH-11, variants of BVH-3 or BVH-11, or chimeric sequences derived from them. A vaccine comprising (I) is useful for therapeutic or prophylactic treatment of meningitis, otitis media, bacteraemia or pneumonia infection in an individual susceptible to these disorders. (II) is also useful for therapeutic or prophylactic treatment of any streptococcal bacterial
            Streptococcus such as Streptococcus as Streptococcus agalactiae, S. dysc
                                                                                                                                                                                                                                                                                                                                                      Example 1; Page -; 113pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                New Streptococcus pneumoniae BVH-3 and BVH-11 variant and epitope-bearing polypeptides, useful as vaccine components for or preventing streptococcal infections such as otitis media, meningitis, and bacteraemia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         WPI; 2002-122272/16.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         27-DEC-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   WO200198334-A2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Streptococcus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         pneumonia;

The DNA probes may also be used for detecting circulating S. pneumonia nucleic acid in a sample for diagnosing streptococcal infections. This sequence represents a truncate of a Streptococcus pneumoniae gene used to obtain antigenic peptides, described in the method of the invention.

Note: This sequence does not appear in the specification but has been created according to information given in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Staphylococcus aureus) in an individual susceptible to the infection. A polymucleotide (III) encoding (I) is useful in DNA immunisation techniques. The Streptococcus polypeptides are useful in a diagnostic test for S. pneumoniae infection. (III) is useful for designing DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Local Similarity

The Streptococcus polypeptides are useful in a diagnostic test for S. pneumoniae infection. (III) is useful for designing DNA probes for use in detecting the presence of Streptococcus in a biological sample suspected of containing the bacteria. The DNA probes may also be used for detecting circulating S. pneumonia nucleic acid in a sample for diagnosing streptococcal infections. This sequence represents a chimeric gene created from fragments and variant fragments of Streptococcus pneumoniae genes, described in the method of the invention.

Note: This sequence does not appear in the specification but has been created according to information given in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      BVH-3 of BVH-11, or chimeric sequences derived from them. A vaccine (II) comprising (I) is useful for therapeutic or prophylactic treatment of meningitis, otitis media, bacteraemia or pneumonia infection in an individual susceptible to these disorders. (II) is also useful for therapeutic or prophylactic treatment of any streptococcal bacterial infection (e.g., caused by Streptococcus pneumoniae, group A Streptococcus such as Streptococcus aureus) in an individual susceptible to the infection. A polymaclectide (III) encoding (I) is useful in DNA immunisation techniques.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  test for S. pneumoniae infection. (III) is useful for designing DNA probes for use in detecting the presence of Streptococcus in a biological sample suspected of containing the bacteria. The DNA probes may also be used for detecting circulating S. pneumonia nucleic acid in a sample for diagnosing streptococcal infections. This sequence represents a chimeric gene created from fragments and variant fragments of Streptococcus pneumoniae genes, described in the method of the invention. Note: This sequence does not appear in the specification but has been created according to information given in the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention describes nucleic acids (I) encoding protein antigens (II) from Streptococcus pneumoniae. The protein antigens have bactericidal activity. The nucleic acids, encoding the protein antigens, may be used for the recombinant production of the proteins they encode. The protein antigens may then be used as vaccines for the prevention and treatment of Streptococcal infections in mammals (especially humans) which result in, e.g. meningitis, ortis media, bacteraemia and/or pneumonia. The present sequence represents the S. pneumoniae BVH-11A protein antigen.
                        BVH-3; BVH-11; vaccine; meningitis; otitis media; bacteraemia; pneumonia; streptococcal bacterial infection; mutant; mutein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     meningitis, otitis media, bacteraemia or pneumonia infection in an individual susceptible to these disorders. (II) is also useful for therapeutic or prophylactic treatment of any streptococcal bacterial infection (e.g., caused by Streptococcus pneumoniae, group A Streptococcus such as Streptococcus progenes, group B Streptococcus such as Streptococcus pyogenes, group B Streptococcus such as Streptococcus autreus) in an individual susceptible to the infection.

C Staphylococcus autreus) in an individual susceptible to the infection.

C A polynucleotide (III) encoding (I) is useful in DNA immunisation techniques. The Streptococcus in a diagnostic test for S. pneumoniae infection. (III) is useful for designing DNA probes for use in detecting the presence of Streptococcus in a biological sample suspected of containing the bacteria. The DNA probes may also be used for detecting circulating S. pneumonia nucleic acid in a sample for diagnosing streptococcus pneumoniae gene used to obtain antigenic peptides, described in the method of the invention.

밁
                           techniques. The Streptococcus polypeptides are useful in a diagnostic test for S. pneumoniae infection. (III) is useful for designing DNA probes for use in detecting the process of Streptococcus in a biological sample suspected of containing the bacteria. The DNA probes may also be used for detecting circulating S. pneumonia nucleic acid in a sample for diagnosing streptococcal infections. This sequence represents a chimeric gene created from fragments and variant fragments of Streptococcus pneumoniae genes, described in the method of the invention.

Note: This sequence does not appear in the specification but has been created according to information given in the invention.
                                                                                                                                                                                                                 BVH-3 or BVH-11, or chimeric sequences derived from them. A vaccine (II) comprising (I) is useful for therapeutic or prophylactic treatment of meningitis, otitis media, bacteraemia or pneumonia infection in an individual susceptible to these disorders. (II) is also useful for therapeutic or prophylactic treatment of any streptococcal bacterial infection (e.g., caused by Streptococcus pneumoniae, group A Streptococcus such as Streptococcus group B Streptococcus such as Streptococcus agalactiae, S. dysgalactiae, S. uberis, S. nocardia or Staphylococcus aureus) in an individual susceptible to the infection. A polynucleotide (III) encoding (I) is useful in DNA immunisation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        epitope-bearing polypeptides, useful as vaccine components for treating or preventing streptococcal infections such as otitis media, meningitis, and bacteraemia -
